

OPERATION

This is a normally-closed, double-blocking poppet-type, 2 position, 08-size solenoid valve. When de-energized, the SVP08-CDB blocks flow in both directions. When energized, the valve's poppet lifts and allows flow from port 2 to port 1, and from port 1 to port 2. This valve comes standard with a push-pin type manual override.

APPLICATIONS

The SVP08-CDB is designed for low leakage applications and can be used to control the advance and retract of single acting and double acting cylinders. The valve can also be used to lock pressure in a group of cylinders.
