## OEM Dual output Transmitters for heavy-duty applications, Type MBS 1300 and MBS 1350

MBS 1300 Series is a dual output transmitter. Output 1 gives a pressure signal where as output 2 gives a temperature signal. The Series consists of two versions:

- MBS 1300 – without integrated pulse-snobber
- MBS 1350 – with integrated pulse-snobber

The integrated pulse-snobber offers a high degree of protection against cavitations and liquid hammer, and the well thought out design results in excellent vibration stability and an exceptional robustness. The high degree of EMI protection equips the pressure transmitter to meet most requirements.

### Features

- Designed for use in severe OEM applications
- For medium and ambient temperatures up to 125 °C
- All standard output signals:  
1 – 5 V, 1 – 6 V,  
10 – 90% ratiometric voltage
- Wetted parts made of stainless steel
- A wide range of pressure and electrical connections
- EMC protection up to 100 V/m

### Approvals

ISO 7637 pulse 1 - 4

**Pulse-snubber in MBS 1350**

**Application**

Cavitation, liquid hammer and pressure peaks may occur in liquid filled systems with changes in flow velocity, e.g. fast closing of a valve or pump starts and stops.

The problem may occur on the inlet and outlet side, even at rather low operating pressures.

The media viscosity has only little effect on the response time. Even at viscosities up to 100 cSt, the response time will not exceed 4 ms.

**Performance (EN 60770)**
**Pressure measurement**

Accuracy (incl. nonlinearity, hysteresis and repeatability)	± 0.5% FS
Thermal zero point shift	<± 0.15% FS/10K
Thermal span shift	<± 0.15% FS/10K
Response time liquids (10 – 90%)	> 0.5 ms
Durability, P: 10 – 90% FS	>10 × 10 <sup>6</sup> cycles

**Temperature measurement**

Accuracy @ 20 °C	± 0.5% FS
TEB - 20 – 80 °C	± 3.0% FS*

\* As the temperature is measured on the thinfilm element, the true response to fluid temperature depends on the installation details, such as the "bulk metal" surrounding e.g. manifold.
